

Summary

Alumnus of the **Indian Institute of Self-Taught**, mentored by **Prof. Curiosity**.
The money is not in the build; it is in the maintenance.
Judgment is not determined by model capability; it is determined by security.

Skills

AgentOps: task success rate, tool-use accuracy, response-quality metrics, cost and latency, drift detection, logging and traceability, and versioned prompts.
Familiarity: LangSmith, Vertex AI, and Langfuse.

Evaluation & Observability: deterministic tests, golden cases, test cases, edge cases, rubric design, LLM-as-a-judge, telemetry, logging, and A/B testing.
Familiarity: Grafana, OpenTelemetry, DeepEval, and Ragas.

Agentic AI: monolithic agents (FCoT), agent-level architecture, modular and scalable multi-agent architecture, self-learning agents, persistent memory, HITL, tool/function/agent routing, handoff schemas, stateful workflows, and guardrails.
Familiarity: LangGraph, CrewAI, Google ADK, MCP, APIs, and A2A.

RAG & CAG: chunking strategies, embedding models, cited retrieval, agentic RAG, graph databases, vector databases, KV caches, and context-window management.
Familiarity: LlamaIndex, Chroma, FAISS, Pinecone, Elasticsearch, Neo4j, and Redis.

AI Safety: prompt injection, zero-trust policy, least-privilege access, data provenance, personal-data protection, tenant isolation, and red teaming.
Familiarity: OWASP Top 10 for Agentic Applications, GDPR, SOC 2, and Open Policy Agent (OPA).

AI Product: problem discovery, data availability, success metrics, automation-versus-agent decisions, MVP scoping, architectural decisions, build-versus-buy analysis, stakeholder management, adoption and feedback, AI ROI, cost to serve, cost per successful task, and tokenomics.

Projects

Enterprise Context Layer | LangGraph, Python, FastAPI

• A user's AI assistant sends a question to the context-layer client, which turns the request into a signed badge carrying the user ID, agent ID, unique token, and time limit RBAC check. The request reaches the gateway context layer, which connects to the company's email, Slack, and databases. The gateway orchestrator_agent() sends the query to a queryplanner_agent(), which runs FTS5 search on the SQL database and cosine-similarity search on the vector database, merges the results, and performs a one-hop graph search. It uses metadata for citations, while a screener_agent() calls the evaluation harness to check retrieval quality. A response agent generates a persona-based answer and returns it, with citations, through the orchestrator to the user's AI assistant.

AI Agent Evaluation Harness | Deterministic checks, scoped LLM judge, golden cases, CI/CD

• A screener_agent() outside the AI-agent evaluation harness detects an event in the main workflow and sends the prompt to the harness gateway. The test_harness() fetches the next case and runs a deterministic schema check. The output then goes to a judge_agent(), which scores it against a pinned rubric using a model different from the main workflow model. If the case meets the threshold, the CI commit gate allows the commit; otherwise, it blocks the case. The judge_agent() also sends suggestions to candidate_proposer() for human approval before adding them to the golden dataset.

SignalWise - Evidence-Gated Product Recommendation | Python, FastAPI, Pydantic, React, TypeScript

• PMs face a difficult challenge when improving a live product. This tool sits between product analytics tools such as Amplitude and product decision-making. It turns onboarding_tickets.csv and support_ticket.csv into behavior-driven product-improvement hypotheses. The tool is simple but designed from a safety perspective.

Job Scouting Agent | Python, SQLite, YAML, HTML, pytest

• A cron job searches predefined job boards through APIs, custom MCP tools, and computer use. It builds an .xlsx file that ranks job descriptions using a rubric defined in a fixed schema. Evaluations check cultural fit, while a deterministic loop checks location eligibility.

What Is Hot? - Technology Signal Digest | Web automation, persistent site memory, deterministic CLI, LLM editorial pass

• A daily newspaper that searches GitHub and technology blogs for the latest technology news.

RAG Bookshelf - Cross-Book Retrieval Build | Python, LangChain splitters, BGE-M3, ChromaDB, Gradio

• Fourteen PDFs are parsed into Markdown, and their images are encoded in base64. The content is divided into character-based chunks, embedded with BGE-M3, and stored in ChromaDB. Retrieval fetches 40 vectors using cosine similarity, ranks them with top-k=8, and sends them to the Gemini 2.5 Flash model. Users submit queries and receive answers through a Gradio UI.

Gmail Multi MCP | Python, JSON-RPC/stdio, Gmail API, OAuth

• A read-and-write MCP client for three Gmail accounts that connects an AI chatbot to Gmail servers. The protocol handshake and each account's OAuth are verified.

Commercial & Product Experience

Sales Manager, Industrial Automation - VINCI Energies (Actemium) | Bengaluru | Jul 2024 - Nov 2025

• Owned South India revenue and delivery: pricing, techno-commercial offers and engineering/operations/supply-chain coordination; revived 10+ dormant accounts into qualified pipeline.

Senior Sales Engineer & Key Account Manager - TD Power Systems | Bengaluru | Feb 2022 - Jul 2024

• Grew Fincantieri revenue 70% through weekly progress reviews and full spec-change traceability; owned seven USA/Europe export accounts from close through order-to-cash.

Sales & Estimation Engineer - JC Industries | Bengaluru | Feb 2018 - Feb 2022

• Doubled revenue in one year by creating a government-tender pipeline; owned tender scope, bills of materials and compliant, margin-protected bids through award.

Co-founder - Siddhi Vinayak Infra-Ventures | Prayagraj | 2017 - 2018

• Raised project finance, ran a concrete-block manufacturing plant; won municipal-corporation and housing-society contracts.

JBM | Manesar | 2016 - 2017

• Graduate Trainee Engineer.

Education & Certifications

IBM AI Product Manager Professional Certificate & IBM RAG and Agentic AI | Coursera | 2026 **Global PGP in Startup Leadership** | Launch Pilot School of Business (Woolf University affiliate) | 2026 **B.E. Electrical & Electronics** | Visvesvaraya Technological University | 2012 - 2016
